Waste Management Initiatives In Top Asian Cities, 2019

Waste management is one of the major problems impacting cities today. The rapid rate of urbanization in Asia has only exacerbated the issue. The main goal of this study is to explore the waste management initiatives of major population centers and economic hubs in Asia. For the purposes of this study, 14 Asian cities were selected based on a confluence of various factors, such as population, GDP per capita, progressiveness in development indices, waste generated per capita, and efficacy of waste management policies.
